

SUPPLY CHAIN MANAGEMENT

Custom Fluidpower stocks an extensive range of industrial filters suitable for a wide range of mining machinery, fluid power systems and OEM applications. We offer both standard and customised packages to suit your needs and to ensure you receive the best components for your system.

Some of our filter kits include:

- Air filters
- Oil filters
- Hydraulic filters
- Fuel filters
- Grease filters
- Filter elements
- Filter indicators & switches
- Condition monitoring equipment

FILTER KIT STOCK & SUPPLY

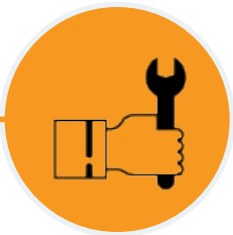

Choosing the right package is essential to preventing contamination, system availability and protection. Through our brand partnerships, we can guarantee high-quality components to ensure performance, reliability, and longevity for your mobile, industrial, or mechanical system.

For systems that require ongoing maintenance and filter changes, we can discuss your future requirements, plan, monitor and predict future demands according to the operating frequency of your machinery. This means we will have the items available when you need them, reducing your downtime and protecting your assets.

Custom Fluidpower acts as a sole product source for our customers providing filter kits and other packages customised for specific applications.

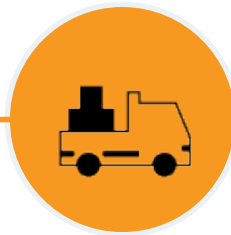

MANUFACTURER

Distribution agreements to supply a full range of components, assemblies, and consumables with all the leading manufacturers.

TRANSPORT

Dedicated to delivering parts to your site with standard and emergency logistics relationships across Australia.

CUSTOM FLUIDPOWER

Offering a variety of remote event, and condition monitoring solutions for systems or machinery diagnostics.

CUSTOMER

Reduced life cycle costs, EDI, innovative engineered solutions and streamlined vendor management.
